Project Title : Streamlining Ticket Assignment for Efficient Support Operations

1. INTRODUCTION

➢ Project Overview

The Streamlining Ticket Assignment for Efficient Support Operations system is designed to manage and automate support ticket handling in an organization. The system helps support teams track customer issues, assign tickets to the appropriate support agents, and monitor ticket resolution.

The system ensures that customer issues are handled quickly and efficiently. It also reduces manual work by automatically assigning tickets based on category, priority, or agent availability.

➢ Purpose

The main purpose of this system is to improve the support process by:

- Managing support tickets efficiently
- Automatically assigning tickets to support agents
- Reducing response time
- Improving customer satisfaction
- Generating reports for performance monitoring

2. IDEATION PHASE

➢ Problem Statement

In many organizations, support tickets are assigned manually. This can cause delays and confusion. Sometimes tickets are assigned to the wrong agents or remain unresolved for a long time.

Support managers also find it difficult to track ticket status and team performance. Therefore, an automated system is needed to streamline the ticket assignment process.

➢ Empathy Map Canvas

User Persona: Support Manager

Think & Feel

Concerned about delayed responses and unresolved customer issues.

Hear

Customer complaints and feedback from the support team.

See

Multiple emails, spreadsheets, and manual tracking systems.

Say & Do

Assigns tickets manually and follows up with support agents.

Pain

- Delayed ticket resolution
- Manual ticket assignment
- Lack of real-time monitoring

Gain

- Automated ticket assignment
- Real-time dashboards
- Faster support service

➢ **Brainstorming and Idea Prioritization**

Step 1 – Brainstormed Ideas

- Manual ticket tracking
- Email-based support system
- Web-based ticketing portal
- Automated ticket assignment system

Step 2 – Grouping

- Manual systems
- Semi-automated systems
- Fully automated support management systems

Step 3 – Final Idea Selection

The **automated ticket assignment system** was selected because it improves efficiency, reduces manual effort, and ensures faster ticket resolution.

3. REQUIREMENT ANALYSIS PHASE

➢ **Customer Journey Map**

Stages involved in the support process:

1. Customer submits support ticket
2. Ticket is recorded in the system
3. Ticket is assigned to support agent
4. Agent works on resolving the issue
5. Issue is resolved and ticket is closed
6. Reports are generated for monitoring

➢ **Solution Requirements**

Functional Requirements

FR No	Description
FR1	Create and manage support tickets
FR2	Assign tickets to support agents

FR No	Description
FR3	Track ticket status
FR4	Notify agents about new tickets
FR5	Generate reports and dashboards

Non-Functional Requirements

Usability

System should be easy to use for support agents and managers.

Security

Only authorized users should access ticket information.

Reliability

The system should process tickets accurately without errors.

Performance

The system should respond quickly even with many tickets.

Scalability

The system should handle increasing number of support requests.

4. PROJECT DESIGN PHASE

Problem–Solution Fit

The system solves the problem of manual ticket handling by introducing automated ticket assignment and tracking.

Proposed Solution

The proposed system automatically assigns tickets to support agents based on ticket category, priority, or availability.

System Flow

1. Customer submits ticket
2. System records ticket
3. System assigns ticket to agent
4. Agent resolves issue
5. System updates ticket status
6. Reports and dashboards are generated

5. PROJECT DEVELOPMENT PHASE

Development Methodology

The project was developed using the **Agile methodology**. The system was built step by step and tested at each stage to ensure proper functionality.

Modules Description

Ticket Management Module

Handles ticket creation and updates.

Agent Management Module
Stores information about support agents.
Ticket Assignment Module
Automatically assigns tickets to available agents.
Notification Module
Sends alerts when a new ticket is assigned.
Reports and Dashboard Module
Displays ticket statistics and performance reports.
Technology Stack

Layer	Technology
User Interface	Salesforce Lightning
Logic	Salesforce Flows
Database	Salesforce Objects
Automation	Validation Rules & Approval Process
Reporting	Reports & Dashboards

6. TESTING
The system was tested to ensure all features work correctly. Testing included ticket creation, assignment, updating ticket status, and generating reports.

7. ADVANTAGES
- Faster ticket assignment
- Improved support efficiency
- Reduced manual work
- Real-time monitoring

DISADVANTAGES
- Requires initial setup
- Depends on the Salesforce platform

8. CONCLUSION
The Streamlining Ticket Assignment for Efficient Support Operations system helps organizations manage support tickets efficiently. It improves response time, reduces manual effort, and provides better monitoring of support activities.
